TITO

Playbook

A Scripted Example of Play

Game-Turns 1–5

Milja Marin, Yugoslav Partisan

Josip Broz Tito with members of his staff

This playbook teaches the opening of *Tito* by walking through a deliberately scripted game. The decisions are legal and plausible, but they are chosen to demonstrate systems rather than provide perfect strategy. Follow the stated setup and use the printed die rolls to reproduce the example at the table.

Presentation by Daniel J. Berger

Version 0.1
July 24, 2026

PREPARE THE GAME
Use the complete setup on page 3

PLAY THE EXAMPLE
Resolve GT1–5 with the displayed results

CONTINUE THE CAMPAIGN
Begin GT6 from the final checkpoint

How to Use This Playbook

The example follows the complete Sequence of Play, but compresses phases in which no choice or game-state change occurs. Every prescribed die roll is shown in a red box. Rules citations point to the restored rulebook.

The map illustrations are snapshots, not stack inventories. Numbered callouts match the accompanying prose; exact stacks are stated in the text and in each turn ledger. Counters are not drawn to scale.

Rules in focus

- Game-Turn 1: movement, objectives, combat, retreat, and recruitment.
- Game-Turn 2: drought, Chetnik collaboration, and Tito.
- Game-Turn 3: Anti-Guerrilla Operations and uprisings.
- Game-Turn 4: winter, brigade formation, and expanded Axis movement.
- Game-Turn 5: locating Tito and an elimination attempt.

P	Partisan
C	Chetnik
Y/A/N	pro-Yugoslav, pro-Axis, neutral
SP	Combat Strength Points
AGO	Anti-Guerrilla Operation
GT	Game-Turn

Play note

This tutorial uses the original restored rules. It does not employ the unverified online addenda.

Sequence Used on Every Complete Game-Turn

A	B	C	D	E
Special Events	Yugoslav Turn	Victory Points	Axis Turn	Terminal Stage

Game-Turn 1 begins with Stage B; Game-Turn 17 ends after Stage C. The phase headings in the example preserve these letters so the reader can always locate the action in the complete sequence.

Before You Begin

1. Turn to “Preparing the Game” on page 3 and follow its complete setup instructions.
2. Keep the rulebook and player aid beside the map. The playbook explains the example; it does not repeat every restriction.
3. Use the red-boxed results rather than rolling. Update the displayed VP, Partisan, Chetnik, and AGO totals at the end of every turn.

Reading the Detail Panels

- Numbered badges correspond to matching badges in the accompanying prose.
- A badge sits near the affected location; it does not define a connection or movement path.
- Counter stacks appear where they clarify the action; a dark $\times N$ tab gives the number of identical counters. The text and checkpoint tables remain the authoritative stack inventory.

Counters You Will Meet First

German Chetnik Tito Partisan group Partisan brigade

Preparing the Game

Rules in focus

Set up every unit listed in [15.1–15.2]. The choices below specify only the locations that matter to the tutorial. Units not named individually may occupy any legal Objective Display in their assigned Zone; keep **Pančevo** and **Cetinje** free of Axis units.

Key Axis Placements

Unit	Objective Display
German 704	Belgrade
German 714	Kragujevac
German 717	Niš
German 718	Sarajevo
Serbian 1–5	Belgrade
Italian Bergamo	Zagreb
Italian Sassari	Karlovac
Italian Macerata	Padgorica

Place the remaining Italians throughout their assigned Zones, but leave Cetinje empty. Place the Bulgarian 14th, 22nd, and 24th Divisions in Skopje, Prilep, and Monastir respectively.

Yugoslav Placements

Place five Chetnik groups in the Serbia Chetnik Hide-away and two in the Montenegro Chetnik Hide-away. All seven begin pro-Yugoslav.

AGO Limit

For this example, the Axis Player draws the Soviet counter with **8 AGO** on its reverse. Keep it concealed as normal [15.31–15.32]. The example will expend three operations by the end of Game-Turn 5.

Why This Setup?

The starting deployments preserve the historical spheres of influence while creating two safe Yugoslav probes:

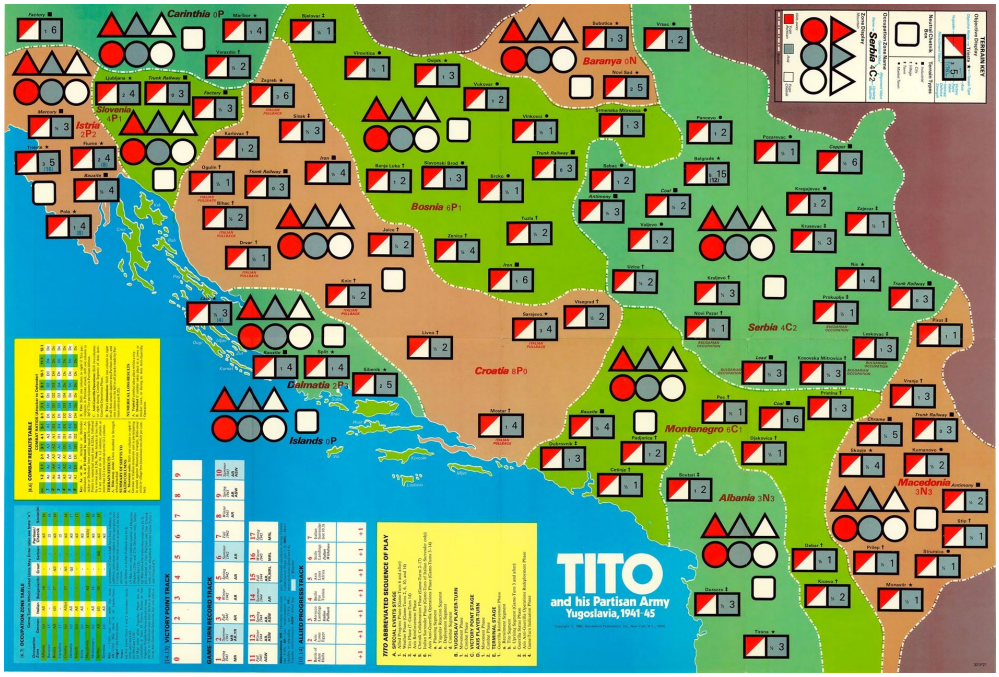
- Pančevo offers the Chetniks a useful Recruitment Value of 1 and a Victory Point Value of 2.
- Cetinje offers a smaller but initially unopposed foothold.
- The German divisions remain close enough to demonstrate the Axis three-Zone movement allowance and a mandatory Objective combat.
- Croatia and Bosnia remain under-garrisoned, setting up the first uprising checks on Game-Turn 3.

Play note

The original setup rules assign units to Zones, not to particular Objective Displays. This freedom is intentional: two legal games can begin with quite different local situations.

Starting Tracks

Game-Turn	1
Yugoslav VP	0
Allied Progress	Not yet begun
Weather	Normal
Tito	Not yet on map
Partisan strength	0 groups
Chetnik strength	7 pro-Yugoslav groups



The complete map before counters are placed. Detail panels on the following pages isolate the active areas without losing their relationship to this overview.

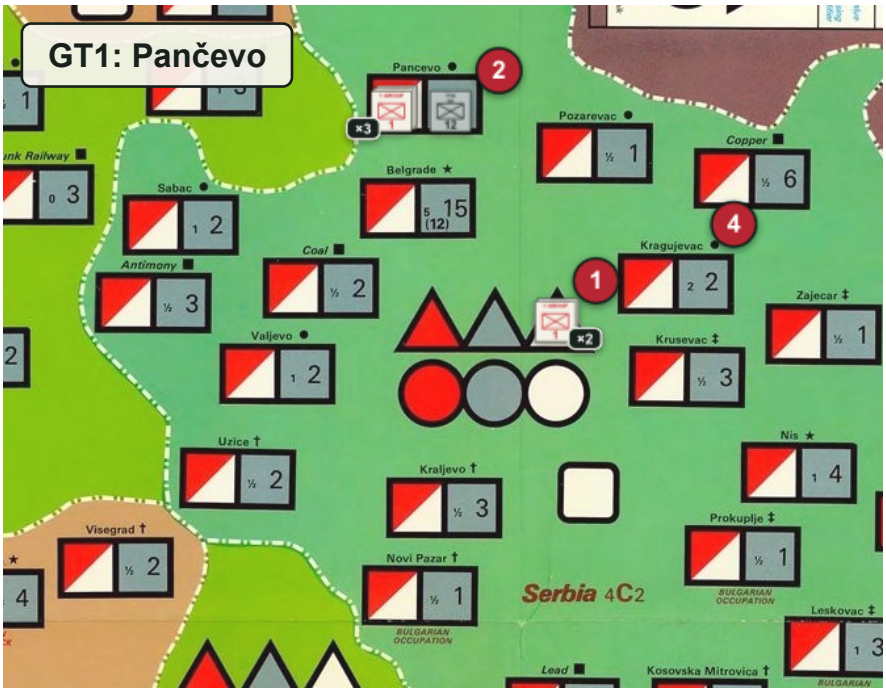
1 GAME-TURN

Testing the Occupation

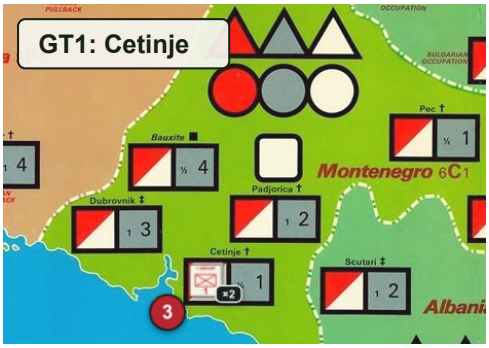
The Chetniks probe two undefended objectives; the Axis answers at Pančevo.

Rules in focus

[4.1] Game-Turn 1 begins with the Yugoslav Player-Turn, so the entire Special Events Stage is skipped. Both sides must remain within their starting Zones on Game-Turns 1 and 2 [6.63, 15.4].



Serbia: the Pančevo probe and German reply



Montenegro: the unopposed move to Cetinje

B. Yugoslav Player-Turn

Movement. From the Serbia Hide-away (1), move three Chetnik groups to Pančevo (2) and two to the Chetnik Mountain triangle. From the Montenegro Hide-away, move both groups to Cetinje (3). All movement is within the units' starting Zones.

Combat. The Axis boxes of Pančevo and Cetinje are empty, so there is no corresponding enemy stack and no combat [8.11].

C. Victory Point Stage

Pančevo is worth 2 VP and Cetinje 1 VP. The Yugoslav Player gains **3 VP**. The two groups in the Serbia Mountain yield no Mountain VP: $2 \div 4$, rounded down, is zero [14.2B].

D. Axis Player-Turn

German 714 moves from Kragujevac to the Axis box at Pančevo (4). Opposing units now occupy corresponding Objective boxes, so combat is mandatory.

Combat calculation

German 714 attacks with 12 SP against 3 Chetnik SP: **4:1**. The Axis Player rolls (3), producing **D1**. Pančevo is a market town, so the numbered result is doubled to **D2** [8.32B]. Two groups are removed and the survivor retreats to the Serbia Chetnik Hide-away [8.24A].

E. Terminal Stage

Recruitment. The two Chetnik groups at Cetinje occupy an Objective with a Recruitment Value of one-half. The Yugoslav Player rolls (4):

$$4 \times \tfrac{1}{2} = 2 \text{ groups.}$$

The result does not exceed the two occupying Yugoslav SP, so two new Chetnik groups are placed at Cetinje [7.44A]. Cetinje now contains four.

The two Chetnik groups in the Serbia Mountain create none: $2 \div 4 = 0$ after fractions are dropped [7.45].

There is no Tito Segment, no Uprising Segment before Game-Turn 3, and neither guerrilla type has reached brigade strength. Advance the Game-Turn marker.

What the Turn Demonstrated

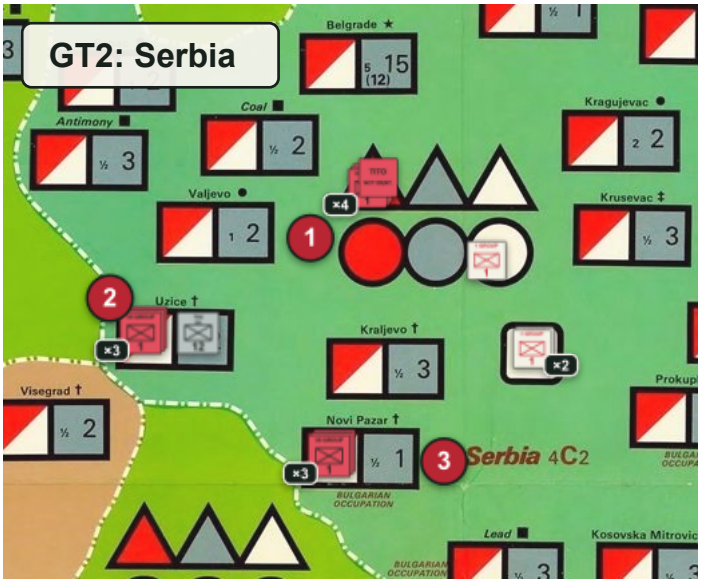
- A unit may move freely among locations within its Zone.
- Combat in corresponding Objective boxes is mandatory.
- Terrain modifies a numbered combat result, not the combat ratio.
- Yugoslav retreats go to the appropriate Hide-away.
- Objective recruitment is limited by occupying Yugoslav SP.

VP this turn	+3	**Running VP**	3
Partisans	None	**Chetniks (Y/A/N)**	7 / 0 / 0
AGO expended	0 of 8		

2 GAME-TURN

Tito Enters the War

Weather, collaboration, and predetermined Partisan reinforcements transform the map.



Serbia: Tito and ten groups divide

A. Special Events Stage

Weather. The Yugoslav Player rolls 2; drought is in effect for Game-Turns 2–5 [11.21–11.23]. Drought halves recruitment in market towns, but does not affect towns or Mountains.

Axis reinforcements. Place German 342 in Serbia and German 125 in Bosnia. Place the Croat Guard regiment and the 1st–3rd Ustaša brigades in Croatia [13.91].

Chetnik collaboration. Roll once for each occupied Chetnik location [7.21, 7.23A]:

Stack	Roll	Modifier	Result
Serbia Mountain (2)	2	+1	Neutral
Serbia Hide-away (1)	4	+1	pro-Yugoslav
Cetinje (4)	1	+1	pro-Axis

Move the neutral stack to Serbia's Neutral Chetnik box and the pro-Axis stack to Montenegro's Axis Mountain [7.24].

B. Yugoslav Player-Turn

At the beginning of Movement, place the predetermined reinforcements in their respective Partisan Hide-aways [7.41, 13.92]. Because Game-Turn 2 still has the starting-Zone restriction, move them as follows:

- Serbia: three groups to Užice 2, three to Novi Pazar 3, and four plus Tito to the Partisan Mountain 1.
- Slovenia: all four groups to the Partisan Mountain 4.
- Montenegro: all three groups to Cetinje 5.

Play note

Tito is a unit for movement and reaction purposes, but has no Combat Strength. His immediate value is organizational: he generates Partisan groups and must be present when the first Partisan brigade is formed.

Slovenia

Montenegro

C. Victory Point Stage

Užice, Novi Pazar, and Cetinje yield 4 VP. The Serbia and Slovenia Mountains each contain 4 Partisan SP and yield 1 VP. Gain **6 VP**; the running total is **9**.

D. Axis Player-Turn

Movement. German 704 moves from Belgrade to the Axis box at Užice. Italian Macerata moves from Padgorica to the Axis box at Cetinje. Both units remain within their starting Zones [6.16, 6.63].

Combat. German 704 attacks the three groups in Užice. At 12:3 the ratio is 4:1; a 3 produces D1, doubled to D2 for the town. Two groups are removed and one retreats to the Serbia Partisan Hide-away.
Italian Macerata attacks Cetinje at 6:3, or 2:1. A 5 produces D1, doubled to D2. Again, two groups are removed and the survivor retreats.

E. Terminal Stage

Recruitment rolls:

- Novi Pazar: 4 times one-half creates 2 groups.
- Serbia Mountain: 4 ÷ 4 creates 1 group.
- Slovenia Mountain: 4 ÷ 4 creates 1 group.
- Tito in Serbia creates 1 group [7.46C].

The Partisans finish with 17 – 4 + 5 = **18 groups**. There are still no uprisings and no organization upgrades.

VP this turn	+6	**Running VP**	9
Partisans	18 groups	**Chetniks (Y/A/N)**	1 / 4 / 2
AGO expended	0 of 8		

3 GAME-TURN

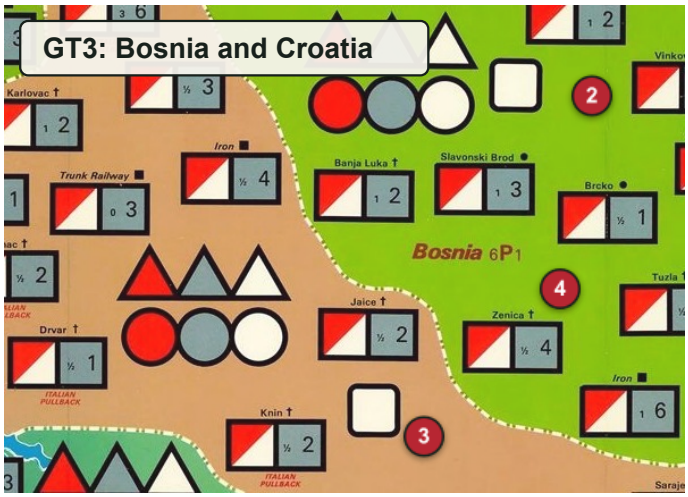
The War Spreads

The first Anti-Guerrilla Operation drives Tito west; uprisings bring the Partisans to brigade strength.

Rules in focus

Game-Turn 3 activates two major systems: Axis Anti-Guerrilla Operations [8.4] and the Uprising Segment [7.47, 7.5]. The starting-Zone restriction has also expired.

Serbia: AGO deployment and reaction west



Bosnia and Croatia: Tito's refuge and uprising checks

A. Reinforcement and Collaboration

Place German 113 in Bosnia and the 4th and 5th Ustaša brigades in Croatia. Transfer German 125 as scheduled [13.91].

Resolve collaboration:

Stack	Roll	Mod.	Result
Serbia neutral (2)	5	0	pro-Yugoslav
Serbia pro-Yugoslav (1)	3	+1	Neutral
Montenegro pro-Axis (4)	5	−1	Neutral

The Axis Player now has no Chetnik groups under control, but this calm will not last.

A. Axis Anti-Guerrilla Operations Phase

Planning. The Axis declares one operation and secretly records *Serbia* 1. German 704, 714, 717, and 342 are selected; each could reach Serbia in a normal Movement Phase and the total is below seven division equivalents [8.41–8.42].

Reaction. The Yugoslav Player rolls 3. Tito and two Partisan groups leave the Serbia Mountain for the Bosnia Partisan Hide-away 2. Tito counts as one of the three reacting units. Four groups remain in the Serbia Mountain.

Deployment and combat. Put 714 and 717 in the Axis Mountain and 704 and 342 in the Axis Hide-away:

- **Mountain:** 24 SP attacks 4 SP at 6:1. The AGO adjustment moves this to 8:1. A 1 produces D1, doubled to D2. Two groups are lost and two retreat to the Bosnia Partisan Hide-away.
- **Hide-away:** 30 SP attacks the lone group that retreated from Užice. Its defensive strength is doubled to 2, yielding 15:1, capped at 12:1. A 1 produces De and eliminates it.

The four German divisions are removed pending redeployment [8.47]. The Yugoslav Player has lost three groups, but the reaction saved Tito and gave the survivors a common refuge in Bosnia.

Play note

An AGO changes the ratio by two columns, doubles numbered results, and sends retreating Yugoslav units to an adjacent Zone. Axis units are never forced to retreat during the operation [8.46].

Situation After the Operation

Bosnia Hide-away	Tito and 4 Partisan groups
Serbia	5 groups at Novi Pazar; no Partisans in the Zone Display
Slovenia Mountain	5 Partisan groups
Montenegro Hide-away	1 Partisan group
Partisan total	15 groups

3 GAME-TURN

From Groups to Brigades

Recruitment and two under-garrisoned Zones fill the Partisan counter pool.

B. Yugoslav Player-Turn

Move Tito and all four Bosnia groups from the Hide-away to the Partisan Mountain, then send one group to Tuzla. Three groups remain with Tito. Keep the five-group stack at Novi Pazar and the five groups in the Slovenia Mountain. Move the lone Montenegro group back to Cetinje.

C. Victory Point Stage

Novi Pazar, Tuzla, and Cetinje yield 4 VP. The Slovenia Mountain yields 1 VP for its 5 SP. The Bosnia Mountain has only 3 SP and yields none. Gain **5 VP**; the running total becomes **14**.

D. Axis Player-Turn

The Axis emphasizes garrison duty and initiates no Objective combat. Units used in the Serbia AGO remain off map until the Redeployment Phase, but may count toward Serbia's garrison because that was the target Zone [7.54].

E. Recruitment and Tito Segments

The Partisans begin the Terminal Stage with 15 groups:

Source	Groups
Novi Pazar: 6 × one-half, cap 5	3
Slovenia Mountain: 5 ÷ 4	1
Tuzla: 6 × one-half, cap 1	1
Cetinje: 4 × one-half, cap 1	1
Tito in Bosnia	2
Total before uprisings	23

E. Uprising Segment

Croatia 3**.** Two Italian divisions, the Croat Guard regiment, and five Ustaša brigades equal $4\frac{5}{6}$ divisions. Drop the fraction when calculating the shortfall: Croatia is four divisions below its Garrison Value of 8. The uprising roll is 1; with a modifier of 0, the modified result is 1. Four short divisions times 1 creates **4 groups**. An alignment roll of 4 is even, so all are Partisan in this P-aligned Zone.

Bosnia 4**.** German 718 and 113 provide two divisions against a Garrison Value of 6. A 2, less Bosnia's modifier of 1, gives a modified result of 1. Four more Partisan groups would be created after an even alignment roll of 2, but only three Partisan group counters remain. Place those three in the Bosnia Partisan Hide-away [7.53, 7.68].

The Partisans now have all **30 group counters** on the map and have achieved brigade strength [7.62A].

E. Guerrilla Status Phase

The first brigade must be created where Tito is located. Five groups occupy the Bosnia Mountain with Tito: three moved there and two arrived in the Tito Segment. Replace three with the 31st Partisan Brigade. Two groups remain with Tito [7.63, 7.67].

The important trigger

The first Partisan brigade has appeared. Beginning next Game-Turn, German movement expands into the Italian sphere, the Bulgarian 25th and 27th Divisions become available, and the Axis may attempt to identify Tito [6.64, 9.41, 13.91D].

VP this turn	+5	**Running VP**	14
Partisans	27 groups + 1 brigade	**Chetniks (Y/A/N)**	2 / 0 / 5
AGO expended	1 of 8		

Checkpoint Before Game-Turn 4

Bosnia Mountain	Tito, 31st Brigade, 2 groups
Bosnia Hide-away	3 groups
Tuzla	2 groups
Croatia Hide-away	4 groups
Slovenia Mountain	6 groups
Novi Pazar	8 groups
Cetinje	2 groups

Redeploy the four German AGO divisions in Serbia. The first-brigade trigger is now permanent even if Partisan strength later falls below 30 group equivalents.

What the Turn Demonstrated

- An AGO is planned before reaction, so the Axis commits units without knowing exactly which guerrillas will remain.
- Reaction can preserve Tito and concentrate scattered survivors in an adjacent Zone.
- AGO participants still count toward the target Zone's garrison while awaiting redeployment.
- Objective recruitment, Tito, and uprisings all resolve before the Guerrilla Status Phase.
- Counter availability is a hard limit: excess uprising reinforcements are lost.

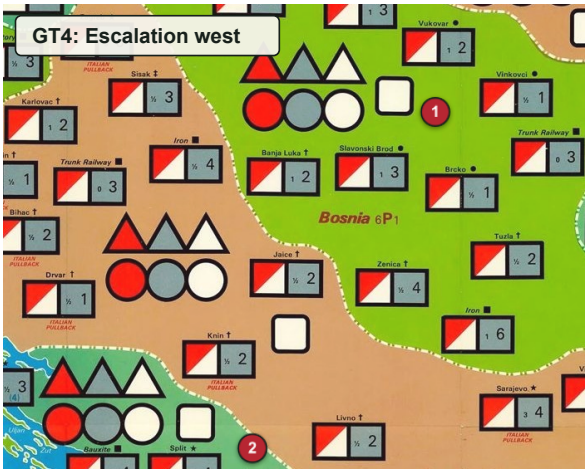
A real decision

The first brigade need not be the 31st, and the Yugoslav Player could leave all five Bosnia Mountain groups unorganized. Creating it now is stronger and activates several Axis responses; delaying it conceals Tito for longer.

4 GAME-TURN

Winter and Escalation

The first brigade unlocks a wider Axis response, while winter suppresses Mountain recruitment.



West: Tito is identified and German 342 enters Croatia

Serbia: Bulgarian 25th and 27th enter

A. Special Events Stage

Winter. Game-Turn 4 is automatically Winter **[11.1]**. Recruitment in villages and Mountains will be halved.

Tito Phase. Because the first Partisan brigade appeared last turn, the Axis may attempt to identify Tito. A 6 succeeds; flip Tito to his identified side 1 **[9.41]**.

Axis reinforcements. Transfer German 113. Deploy the five regular and five mountain Croat brigades: six in Bosnia and four in Croatia. The brigade trigger also releases Bulgarian 25 and 27; place them in Bulgarian Occupation objectives in Serbia 3 **[13.91D]**.

Collaboration.

Stack	Roll	Mod.	Result
Serbia pro-Yugoslav (2)	3	+1	Neutral
Serbia neutral (1)	5	0	pro-Yugoslav
Montenegro neutral (4)	2	0	pro-Axis

A. Anti-Guerrilla Operation: Bosnia

The Axis declares Bosnia. German 718 and four strength-2 Croat mountain brigades participate. The Reaction roll is 2; Tito and the 31st Brigade move to the Croatia Partisan Mountain. Two Partisan groups remain in the Bosnia Mountain and three in the Hide-away.

Split the Axis force:

- German 718 and two Croat brigades attack the Mountain: 16:2 is 8:1, adjusted to 10:1. A 1 gives D2, doubled to D4. Both groups are lost.
- Two Croat brigades attack the Hide-away: 4 SP against doubled defense of 6 begins at 1:2, adjusted to 2:1. A 5 gives D1, doubled to D2. Two groups are lost and one retreats to an adjacent Hide-away.

B–D. Player-Turns and Victory Points

The Yugoslav Player preserves the dispersed Objective positions. The Victory Point Stage produces:

Novi Pazar, Tuzla, and Cetinje	4 VP
Slovenia Mountain (6 SP)	1 VP
Croatia Mountain (one 4-SP brigade)	1 VP
Turn total	6 VP

The running total is **20 VP**.

During the Axis Movement Phase, German 342 begins in Serbia 4 and moves into Croatia 2. This would have been prohibited before the first-brigade trigger; German units may now enter the Italian sphere **[6.64A]**.

E. Terminal Stage

Recruitment at Novi Pazar, Tuzla, and Cetinje produces one group apiece after 2, 2, and 2. Tito produces three groups in Croatia.

Winter prevents Mountain recruitment in both illustrated cases:

$$\lfloor 6 \div 4 \rfloor \div 2 = 0 \qquad \lfloor 4 \div 4 \rfloor \div 2 = 0.$$

After the four AGO losses and six reinforcements, 29 Partisan groups are on the map.

Croatia's Axis garrison now rounds down to seven divisions, one below its Garrison Value. An uprising roll of 1 and even alignment roll of 4 create the 30th Partisan group. Bosnia's roll of 1, reduced by its Uprising Modifier of 1, fails.

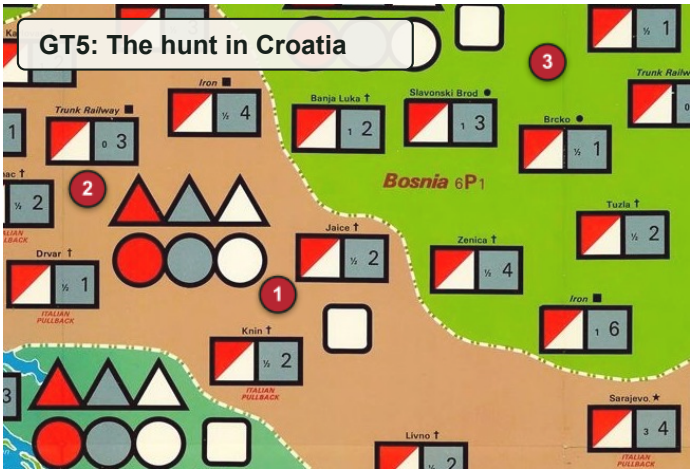
The three groups just created by Tito share his Mountain location. Replace them with the 32nd Partisan Brigade. Once brigade strength has been achieved, later brigades need not be created with Tito—but doing so here is convenient.

VP this turn	+6	**Running VP**	20
Partisans	27 groups + 2 brigades	**Chetniks (Y/A/N)**	1 / 4 / 2
AGO expended	2 of 8		

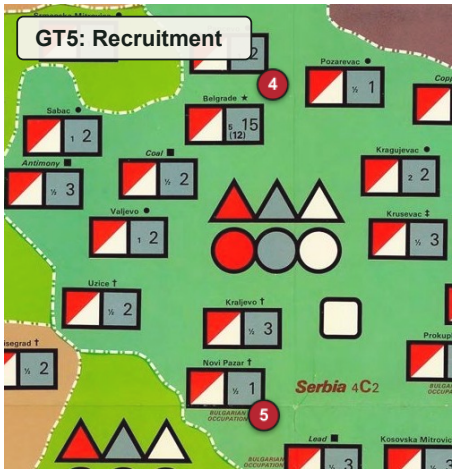
5 GAME-TURN

The Hunt for Tito

The Axis locates Tito, commits the 501st SS, and makes its single elimination attempt.



Croatia and Bosnia: the hunt, AGO, and retreat



Serbia: doubled recruitment penalty and one surviving source

A. Tito, Reinforcement, and Collaboration

Tito was identified last turn, so the Axis may now attempt to locate him. The roll is 6: Tito is located 1, making the German 501st SS Parachute Battalion available in the ensuing Axis Reinforcement Phase [9.42]. Place it in Croatia. Transfer German 342 as scheduled.

Resolve collaboration:

Stack	Roll	Mod.	Result
Serbia neutral (2)	5	0	pro-Yugoslav
Serbia pro-Yugoslav (1)	2	+1	Neutral
Montenegro pro-Axis (4)	3	−1	pro-Axis

A. Anti-Guerrilla Operation: Croatia

The Axis commits the 501st SS, German 704, Italian Bergamo, and two Croat mountain brigades to the Croatia operation 2: 23 SP in all. The Reaction roll is 1. The Yugoslav Player moves an exposed Partisan group elsewhere but deliberately leaves Tito and both Partisan brigades in the Croatia Mountain so the tutorial can demonstrate the elimination procedure.

Deploy the entire Axis force in the corresponding Axis Mountain. Before normal combat, make the one permitted elimination attempt [9.43]. The Axis rolls 3; Tito is not eliminated, but is withdrawn for three full Game-Turns. Put his counter aside. He will return as a Partisan reinforcement on Game-Turn 9.

Play note

The attempt has now been spent even though Tito survived. A result of 6 would have eliminated him; 1–5 withdraws him for that many full Game-Turns.

Resolve the AGO combat. The Partisan brigades defend with 8 SP. Twenty-three to eight rounds down to 2:1; the AGO adjustment moves the attack to 4:1. A 3 produces D1, doubled to D2. A strength-4 brigade cannot satisfy a 2-SP loss, so no unit is eliminated, but both brigades must retreat. The Axis chooses the Bosnia Partisan Hide-away 3 [8.22A, 8.46].

B–D. Player-Turns and Victory Points

During Yugoslav Movement, move the two brigades from the Bosnia Hide-away to the Bosnia Mountain. Move two groups from Novi Pazar to Pančevo, leaving seven at Novi Pazar.

Victory Points:

Pančevo, Novi Pazar, Tuzla, Cetinje	6
Bosnia Mountain: 8 SP, 2 units	2
Slovenia Mountain: 6 SP	1
Tito withdrawn	−5
Turn total	4

The running total is **24 VP**.

E. Terminal Stage

Tito's absence halves all Objective and Mountain recruitment [9.32]. At drought-stricken Pančevo 4, recruitment would be halved for drought and again for Tito's absence. More than one halving means **no reinforcement** [7.49].

Elsewhere, Bosnia Mountain creates 1 group after Tito's modifier. Rolls of 4 at Novi Pazar 5 and 4 at Tuzla create 1 group apiece after the same modifier. A 2 at Cetinje and the Slovenia Mountain calculation both round to zero. The three available group counters are now all in use.

Bosnia now has only three division equivalents against its Garrison Value of 6. An uprising roll of 2, reduced by Bosnia's modifier of 1, would generate three Partisan groups after an even alignment roll of 2. None can be placed because the Partisan group counter mix is exhausted [7.53, 7.68].

VP this turn	+4	**Running VP**	24
Partisans	30 groups + 2 brigades	**Chetniks (Y/A/N)**	2 / 4 / 1
AGO expended	3 of 8		

After Five Turns

Rules in focus

The example stops at a natural transition point. The Partisans have organized into brigades, German movement has expanded, the Chetniks are politically fragmented, and Tito is temporarily off map. Game-Turn 6 will introduce Allied Progress and a new Weather determination.

End Position

Item	State after Game-Turn 5
Yugoslav VP	24
Partisans	30 groups, 2 brigades
Tito	Withdrawn; returns GT9
Chetniks	2 pro-Yugoslav, 4 pro-Axis, 1 neutral
AGO reserve	5 remain from the secret limit of 8
Weather	Drought ends with GT5
Brigade trigger	In effect since GT3
Bulgarian 25/27	Deployed in Serbia
German 342	Transferred on GT5

What Happens on Game-Turn 6?

1. Begin Allied Progress in Box 1 and make the first progress roll **[10.11]**.
2. Make the GT6 Weather roll, establishing conditions through GT9 **[11.22B]**.
3. Tito remains off map; skip identification and location.
4. Deploy German 7SS **[13.91]**.
5. Continue collaboration and decide whether another AGO is worth one of the five remaining operations.

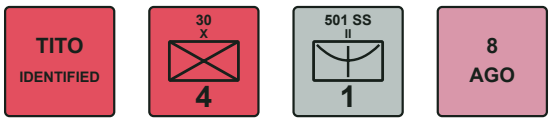
Do not read 24 VP as a forecast

The tutorial makes conservative Objective choices and deliberately exposes Tito. Its running total exists to teach the Victory Point Stage, not to model expert Yugoslav play or predict the final result.

Five Opening Lessons

1. **Occupation is temporary.** Guerrillas can collect VP and recruits without defeating every Axis unit, but an Axis response can force them back into the Hide-aways.
2. **The political map matters.** Chetnik allegiance changes can transfer whole stacks between players or remove them from both players' control.
3. **Reaction is the defense against AGOs.** Moving Tito or an organized unit before deployment may matter more than preserving isolated groups.
4. **Garrison arithmetic drives growth.** A large Zone shortfall can create more Partisans than routine Objective recruitment.
5. **Triggers reshape the war.** The first brigade widens German movement, releases Bulgarian reinforcements, and starts the hunt for Tito.

Rules Used Most Often

4.2	Sequence of Play
6.1–6.4	Movement and stacking
7.2	Chetnik collaboration
7.4–7.6	Recruitment, uprisings, organization
8.1–8.3	Combat and terrain
8.4	Anti-Guerrilla Operations
9.3–9.4	Tito, recruitment, and the hunt
11.0	Weather
13.9	Reinforcement and transfer schedule
14.2–14.3	Victory Points


Continue the game from Game-Turn 6—or reset the pieces and try a different opening.
