Results

Ae/De: The entire attacking or defending force is eliminated.

A#/D#: The affected force loses units totaling as many Strength Points as possible without exceeding the number, then retreats. Attacks below 1:2 use the 1:2 column; attacks above 12:1 use the 12:1 column.

Terrain and Numerical Losses

- Hide-away defenders are doubled in Combat Strength.
- Triple a numerical result in a city.
- Double it in a town or market town.
- Double it during an Anti-Guerrilla Operation.

Ratio-Column Shifts

- **Mountain unit:** shift one column right when a German or Italian mountain unit attacks a Mountain, Hide-away, or village; maximum one shift.
- **Tito participates:** shift one column right in a Partisan attack or one column left in a Partisan defense.
- **Anti-Guerrilla Operation:** shift two columns right.
- **After Tito is eliminated:** shift one column right for Axis attacks against Partisans and one column left for Partisan attacks.

Combat procedure: Total participating Strength Points → apply defensive terrain effects → form and round down the attacker:defender ratio → apply ratio shifts → roll one die → apply and modify the result → retreat if required.
